When aggression of Russia towards Europe becomes real step by step

24 NOVEMBER 2026

NA

"French President Emmanuel Macron warned on Friday of a "new level" of Russian aggression following a spate of incidents across Europe this week." reported by Euronews. What has happened?

Poland received Russian missiles and drone attack during military training. Denmark's Security and Intelligence Service (PET) accused Russian intelligence services of attempting an assassination in September. Estonia suspends all land crossings with Russia from 1st of December after an attempt of drone attack. Moldova also closed its air space after a drone attack. Russia- Ukraine war is familiar. However, "Zelenskyy said Russia had fired more than 400 attack drones and over 110 missiles during the assault, which he called "one of the largest attacks" of the war so far.".

Russia, Ukraine and the US hold trilateral peace talk in Abu Dhabi on 10 November. Main purpose of the peace talk is lost if not empty from my previous comment. Russia promised to keep its threat towards Ukraine before the talk. This was increasing after the talk and spreads on to Europe. Germany estimated the attack to Europe from Russia before 2029 (Russia may attack Nato in next four years, German defence chief warns). It is possible before 2028 when US President Trump can lose the US election extended from the mid- term result. Then US may strengthen Ukraine and Europe again as usual in history. From the stalemate of the war in Ukraine, Russia can use nuclear weapons for a quick win over Ukraine then parts of Europe within a short period from now to 2028, or even close to 2028. Close to 2028 ? It takes little time to realise the result of nuclear attack and unpredictable responses. Russia does not benefit by premature moves.
