# Caribbean Flashpoint

The renaming of the Ministry of Defence to the Ministry of War directly lives up to its name, considering recent events in the Caribbean. Donald Trump's second term in office marks major changes in US domestic and foreign policy, one of them being the renaming of the Ministry of Defence, whose name Trump considered to be "too defensive" and too "woke". Reflecting this new strategy are the latest operations on the crackdown of "narco-terrorism" in the Caribbean. An operation that raises concerns about whether Trump still respects international law and whether he will respect international norms for intervention, maritime law and sovereignty in the future.
