Can the New US Stealth Planes Stop China's Rise? – Details on the F-47 and B-21

Timeframe: 01/01/2010 – 01/07/2025

United States of America · Arms Control & Disarmament · Issue VII

Key Insights

- Main Question: Can new US stealth aircraft like the F-47 and B-21 stop China's rise as a dominant air power in the Pacific? Argument: The US is facing a shrinking and aging air fleet while China modernizes rapidly, but advanced technologies in the F-47 and B-21 could shift the balance. Conclusion: If deployed in time, these next-gen stealth platforms may restore US aerial dominance, but delays could tip the scales to China.
