US, Russia and China completed the recent Tri talk. After 20 November, CGTN issued an AI generated video showing US president Trump in White House appreciated China and this in turn indicated the support from Trump administration although US and China are in a race of running the world. The truth of the video from a state- controlled channel is not significant except for boosting the importance of China, especially through AI. Then Russia is obsessed with the war in Ukraine. US issued a joint statement for three of them.

CBS news issued another video showing Trump reinforcing the rejection against International Criminal Court with China and Russia. The latter is convicted in the war in Ukraine and dislikes the court. However, there is no clue why China has joined the squad of rejection. What benefits would China have if the rejection is successful while Trump is in power?

Preparation for attacking Taiwan is one of the likely answers. The attack would be more acceptable than and even legitimate not from an example of Russia-Ukraine war. The conviction of Russia can also carry less pressure. When opportunities arise, the tri squad also have large permanent veto power in UN Security Council to downplay the conflicts suiting their common interests.
